

Special remarks

Panel sizes Useable finished panel sizes, after all four panel edges have been trimmed off.	Important limitations Zenor: No custom colors, perforations and engravings available. No concealed fastening, no coating on both sides.	Incora: Only available in 8 mm thickness.
Useable finished panel sizes, after all four panel edges have been trimmed off.		
930 mm width panels Panels with 930 mm width are only available in selected Carat colors and require a minimum order quantity of 500 panels.	Because 930 mm and 1220 mm panels are produced from different production batches it is not suggested to intermix the panels on the same façade as slight color discrepancies may exists.	
Important limitations Kandor: Not available in North America. No custom colors, perforations and engravings available. No concealed fastening, no coating on both sides.

General information

The various color families allow the unique character of the Swisspearl panels to be expressed in an almost endless diversity. The carefully chosen full-body color and color finishes, each in their own way, emphasize the unmistakable aesthetics of the material, and combine material and color to form a single whole.

CARAT	Carat panels are integrally colored with a transparent lightly pigmented acrylic top finish shade in shade.
CARAT HR	Carat-HR is a special surface treatment which offers an increased scratch resistance and a higher UV resistance. Furthermore, most graffiti can be removed using acetone. Generally the aspect resembles the Carat finish, whereas HR panels have a slight sheen to the surface. Carat and HR panels can be used on the same elevation, if possible with a separation between them.
CARAT F	Providing a slightly unsmooth surface, the thicker coating with opaque pigmentation of this acrylic finish allows vibrant colors. It also provides an increased protection against weathering and UV radiation. Available on request in all standard Carat colors and as custom shades.
CARAT R	Integrally colored with a special opaque pigmentation finish for the roof. It also provides an increased protection against weathering and UV radiation as well as a slightly textured surface.
AVERA	Avera are integrally colored fiber cement panels with a vibrant texture never seen before.
INCORA	The innovative Incora façade panel stands out through a vivid spreading pattern, generated through granulated marble.
REFLEX	These panels are directional, integrally colored and have an iridescent surface coating which is purely acrylic. Changing lighting and angles of vision produce amazing nuances in color shades.
NOBILIS	The semi-translucent surface coating on a pure acrylic basis provides the classic fiber cement appeal with much visual depth to it.
ZENOR	Fiber cement panels, with smooth opaque surface coating that resembles the base panel color.
KANDOR	Grey based fiber cement panels with fine-grained opaque coating.

Detailed specifications please refer to our DIM Design and Installation Manual or contact one of our dedicated Technical Advisors.

The printed colors may differ from the original shade of the color. To see the exact color, and when matching up colors on adjacent parts of a building, one must use the original panel samples.

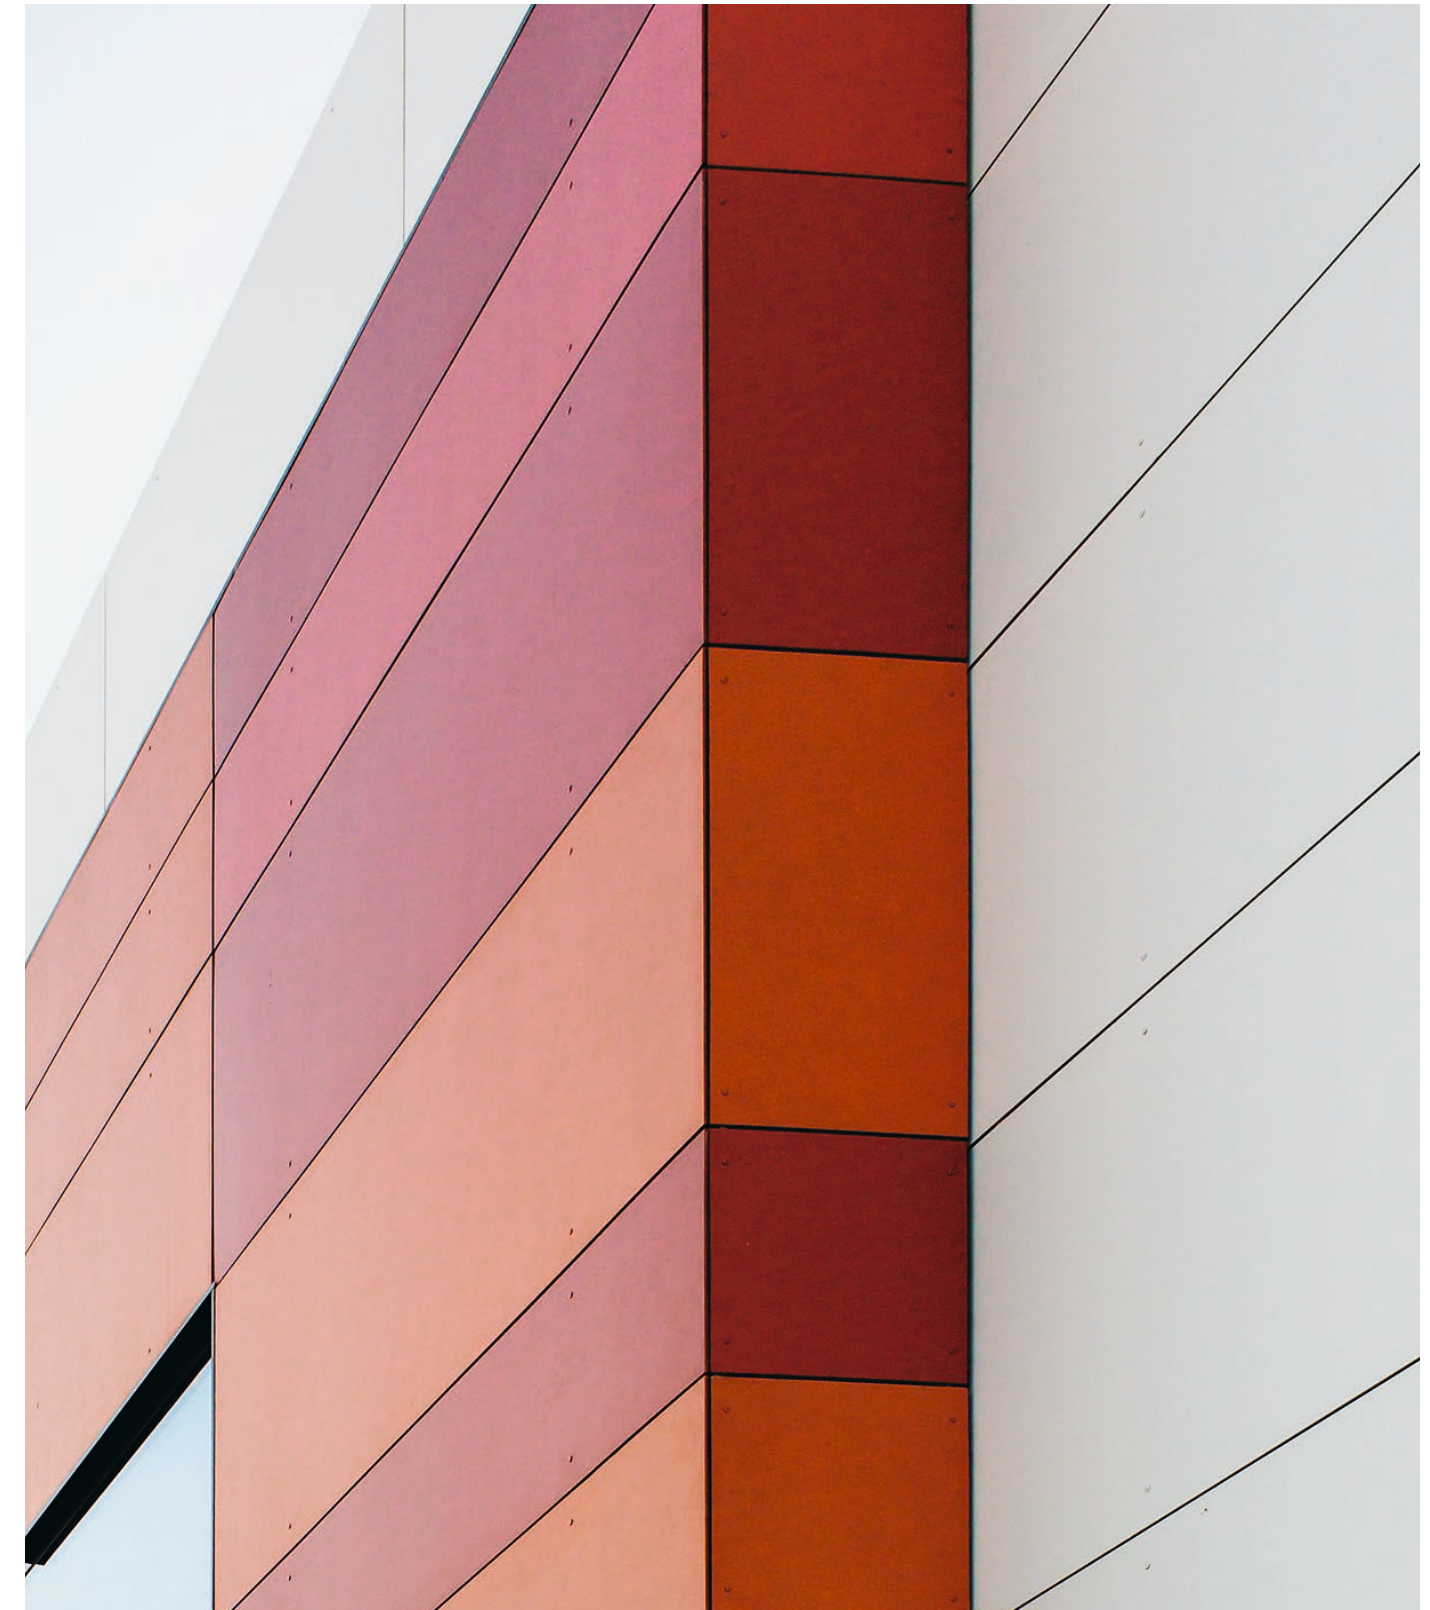

The natural ingredients used in the fiber cement panels will to some extent determine the unique character of the material. The intensity and color tone may vary slightly depending on the production batch.

More details can be found on our website.
